Bharat Bandh: Max impact in Punjab, Haryana

In today’s episode of the 3 Things podcast, we talk about how the farmers’ movement has impacted Indian Army faces while being deployed on the eve of Actual Control Day during the harsh winter

PM on SG

On December 20, 2018, the Indian Space Research Organisation (ISRO) launched the country’s first communication satellite, GSAT-11. The satellite was launched using the Geosynchronous Satellite Launch Vehicle (GSLV) Mk-III D2 rocket from the Satish Dhawan Space Centre (SHAR) in Sriharikota, Andhra Pradesh.

The GSAT-11 satellite is equipped with 21 spot beams to provide communication services to different parts of the country. The satellite has a designed life of 15 years and is expected to provide services to over 150 million households.

The launch of GSAT-11 marked a significant milestone in India’s space programme and paved the way for further advancements in the country’s satellite technology.

In this episode of the 3 Things podcast, we discuss the significance of the launch of GSAT-11 and its impact on India’s space programme.

The satellite was launched to provide communication services to underserved and remote areas of the country. The satellite has a designed life of 15 years and is expected to provide services to over 150 million households.

The government needs to encourage more remunerative cropping patterns, while addressing farmer anxiety.

Amithi Kundu and Harbir Singh Sidhu

Under the current procurement policy, the advantages of producing high-quality wheat have been ignored. Since the origin of the Public Distribution System (PDS) in 1976, the procurement policy of the government was such that the farmers were automatically assured a market for their wheat. However, the procurement policy has been based on the government’s purchase of grain for PDS. This has led to the situation where farmers are assured a market for their wheat, but the prices they receive are not reflective of the market value of their crops. This has resulted in the farmers not being incentivized to produce high-quality wheat.

In the current scenario, the procurement of high-quality wheat is not a priority for the government. The government procures wheat from farmers at a price determined by the Minimum Support Price (MSP). However, the MSP for high-quality wheat is lower than the MSP for regular wheat. This has led to farmers not being encouraged to produce high-quality wheat.

The government needs to reconsider the procurement policy and prioritize the procurement of high-quality wheat. This would incentivize farmers to produce high-quality wheat, which would in turn benefit consumers and the economy.

On the other hand, the government needs to also address the farmer anxiety. The procurement policy needs to be revised to ensure that farmers are not adversely affected by changes in the policy. The government needs to ensure that farmers are provided with alternative livelihood options and support to help them transition to remunerative cropping patterns.

The government needs to work closely with farmers and agricultural organizations to ensure that the procurement policy is beneficial to both farmers and consumers. The government needs to ensure that the procurement policy is transparent and fair, and that farmers are not exploited.

In conclusion, the government needs to reconsider the current procurement policy and prioritize the procurement of high-quality wheat. This would incentivize farmers to produce high-quality wheat, which would in turn benefit consumers and the economy. The government needs to work closely with farmers and agricultural organizations to ensure that the procurement policy is beneficial to both farmers and consumers. The government needs to ensure that the procurement policy is transparent and fair, and that farmers are not exploited.

The pandemic has required experts to draw on experiences of dealing with other diseases such as epidemics, cl-analysis for prevention and preparedness. The National Institute of Epidemiology, the Indian Council of Medical Research, and the disease control programme have been working on developing and testing vaccines. These vaccines have been found to be safe and effective, and the government has been ensuring their timely distribution to the public.

The pandemic has also highlighted the importance of strong health systems and the need for investment in healthcare infrastructure. The government has announced plans to increase the number of hospital beds and intensivcare units in the country. Additionally, the government has launched various initiatives to strengthen the primary healthcare system, including the Ayushman Bharat Yojana, which aims to provide free and affordable healthcare to all.

Despite these efforts, the pandemic has also exposed the challenges faced by the healthcare system in India, particularly in terms of shortage of medical professionals, inadequate hospital beds, and lack of testing and tracing capacities. The government has been working to address these issues by ramping up the testing and vaccination drive, as well as increasing the capacity of hospitals across the country.

In conclusion, the pandemic has underscored the importance of investing in healthcare infrastructure and strengthening the public health system. The government has taken steps to address these challenges, and the country is working towards building a resilient and responsive healthcare system to meet the needs of its population. However, there is still a long way to go, and the country must continue to prioritize healthcare and the well-being of its citizens to overcome the challenges posed by the pandemic.

A new drug called Molnupiravir has been shown to stop the transmission of SARS-CoV-2, the virus that causes COVID-19, in a study by researchers at the University of Washington. This breakthrough drug could be a game-changer in the fight against COVID-19.

The drug essentially stops the replication of the SARS-CoV-2 virus, which is responsible for the COVID-19 pandemic. Molnupiravir is a prodrug that is activated by enzymes inside the host cell, specifically the same enzymes that the virus uses to replicate itself. This activation results in the incorporation of the drug into the genetic material of the virus, eventually leading to its demise.

The study, conducted on ferrets, showed that Molnupiravir significantly reduced the viral load in the respiratory tract of infected ferrets. The team also observed that the drug could prevent the transmission of the virus from infected animals to uninfected animals when it was administered at early stages of infection.

The results of this study are particularly promising as they suggest that Molnupiravir could be used as a prophylactic agent, preventing the transmission of SARS-CoV-2 from one person to another. This could be particularly useful in high-risk settings such as hospitals, nursing homes, and public transport systems.

The US Food and Drug Administration (FDA) has already granted emergency use authorization (EUA) for Molnupiravir for the treatment of COVID-19 in adults with mild to moderate disease, as well as those who are at high risk of progressing to severe disease.

In summary, Molnupiravir represents a significant advancement in the fight against COVID-19. Its potential as a prophylactic agent offers hope for preventing the transmission of the virus, which is a key challenge in controlling the pandemic. Further research is needed to confirm these findings and determine the optimal use of Molnupiravir in clinical settings.
Trump to sign order for priority access to Covishield, Covaxin vaccines for 90-year-olds

The White House was scheduled to hold a seminar on Tuesday in the expansion of plans for coronavirus vaccinations. One official said the move was a response to criticism from the White House. It was unclear why the move was overturned.

President-elect Joe Biden is expected to issue an executive order to ensure that all Americans have access to vaccines and that no one is turned away. The move is expected to be part of a broader strategy to expand access to the vaccines.

Biden will be named Chief of Staff

NOVEMBER SEES HIGHEST NET MONTHLY OUTFLOW IN AT LEAST 15 YEARS

India (Amfi). November saw a dip in mutual funds flows, the highest ever monthly outflow in at least 15 years. The total outflow from domestic and foreign portfolio investors during the month was Rs 86,602 crore, against a net inflow of Rs 13,392.95 crore in October. The net outflow from equity mutual fund (EMF) was Rs 12,917 crore in November, the highest ever monthly outflow from EMFs in at least 15 years.

Market rally prompts profit booking: Equity MFs see Rs 12,917 cr pullout

November’s market rally saw profit booking in equity and debt instruments, causing a significant outflow from mutual funds. According to the AMFI data, November’s outflow was the highest since at least 2005, with equity MFs recording a net outflow of Rs 12,917 crore. This is the highest outflow in a month since 2005, and the highest ever for the category.

Equity MFs see `12,917 cr pullout

The benchmark Sensex surged to all-time high levels, investors are offloading their equities in an apparent profit booking. The EMFs have been primarily focused on equity investment over the past few months, with signs of a closing up in the recent rally. However, the outflow in November was unprecedented, with the MFs selling off equity stocks worth Rs 12,917 crore. This is the highest outflow in a month since 1994.

November’s equity market downturn has caused a significant outflow from mutual funds. The benchmark Sensex surged to all-time high levels, investors are offloading their equities in an apparent profit booking. The equity MFs have been primarily focused on equity investment over the past few months, with signs of a closing up in the recent rally. However, the outflow in November was unprecedented, with the MFs selling off equity stocks worth Rs 12,917 crore. This is the highest outflow in a month since 1994.

With domestic stock markets gearing up for a strong rally, equity MFs were the biggest sellers in the month. The EMFs have been focusing on equity investment over the past few months, with signs of a closing up in the recent rally. However, the outflow in November was unprecedented, with the MFs selling off equity stocks worth Rs 12,917 crore. This is the highest outflow in a month since 1994.

India have a miss field day

Sloppy visitors lose to Australia in final T20, despite Kohli’s masterclass in chase

India were outplayed in the middle order as Australia gave them a comprehensive record victory of 145 in the second T20 International at the MCA ground in Pune on Friday, to level the series. India were bowled out for 47 in their reply to Australia's 128/7, which was posted in 19.5 overs.

Before the match, Mohammed Azam and Abhishek Nayar signed autographs for fans at the MCA ground. However, the game started on a low note as the first three overs were bowled without reaching a run.

Australia's opening partnership of 54 in 7.3 overs set a target of 133 runs for India. Pandya, who came in to bat at No. 3, started off aggressively, hitting four boundaries and a six in his opening 20-ball knock. However, his innings ended at 41 when he was caught out by Two Edelman at the MCA ground.

Australia's middle-order batsmen, including Maxwell and Haris, chipped in with useful contributions as the visitors posted 128/7 in their 19.5 overs. Pandya, who bowled 4.1 overs, finished with figures of 3-38. Despite the loss, Pandya expressed confidence in the team's abilities.

India's bowling unit, led by Pandya, put up a solid performance,限制ed Australia to 128 runs. Pandya had a successful over, giving away only 5 runs.

On the other hand, India’s batting unit failed to deliver, with only three players scoring over 10. Pandya, who made 41, was the only overnight scorer. Although Pant and Pandya added a 53-run partnership, it was not enough to get India over the line.

India’s bowlers, led by Pandya, put up a solid performance to restrict Australia to 128 runs. Pandya had a successful over, giving away only 5 runs. Despite the loss, Pandya expressed confidence in the team's abilities.
